## NATIONAL FIRE, ARSON & EXPLOSION INVESTIGATION TRAINING PROGRAM

### SPECIAL ONE DAY PROGRAMS

Two special one-day pre-programs will be offered on **Sunday, March 16, 2008.**

#### COMPUTER FIRE MODELING

Mathematical computer fire modeling is the "State-of-the-Art" in fire investigation technology. It requires careful judgment to accurately utilize information gained from the models. The course will introduce the student to Fire Dynamics Tools (FDTs), CFAST, and Fire Dynamics Simulator/Smokeview (FDS). Additionally, the student will be given valuable information regarding the history of computer fire models, input required to successfully implement computer models, how to interpret the output data, how to test their hypotheses, and to provide hands-on examples of how they can be used by fire investigators in the field. The instructors will outline the strengths and limitations of the models and provide a solid basis for further study.

#### CERTIFIED FIRE INVESTIGATOR INSTRUCTOR (CFII)

This course centers around instructor methodology as it relates to the field of fire investigation. The certification examination will be held at the end of this one-day training program. Though the CFEI designation is required to become a National Board Certified Fire Investigation Instructor, individuals who wish to get both certificates will be allowed to take the instructors program first. Upon successful completion of both examinations, both certifications will be issued.

### New Location!

### New 4 Day Expanded Curriculum!

### Same Great Instructors!

**MARCH 17 - 20, 2008**

Internationally recognized authorities will present illustrated lectures on fire and explosion investigation. The training program lecturers are among the premier fire and explosion experts in the world. **All technical speakers are members of the NFPA Technical Committee on Fire Investigations or its Task Groups.** Nowhere else can the fire and explosion investigator meet and learn from these acknowledged experts in their fields, all gathered together for one training program. The program will focus on proper investigative techniques as outlined in **NFPA Fire Code 921 - Guide for Fire and Explosion Investigations.** Both basic and advanced lectures will be given. This training program is designed to meet the needs of the newest investigator as well as to enhance the knowledge of the most experienced investigator.

#### Program Topics

- Dynamics of Fire Investigation
- Chemistry and Physics of Fire Behavior
- Science of Fire Dynamics
- Basic and Advanced Fire Pattern Analysis
- Fire/Explosion Scene Investigation Techniques
- Diagramming of the Fire and Explosion Scene
- Collection and Preservation of Evidence
- Origin Determination
- Evaluation of Fire Causes - Failure Analysis
- Determination of Electrical Fire Causes
- Explosion Dynamics and Scene Investigation
- Effective Fire Case Testimony
